No wonder, Oswaal Books holds an enviable place in every student's heart! Sports are not what they used to be. New publicly funded stadiums resemble shopping malls. Fans compete for cash prizes in fantasy sports leagues. Sports video games are now marketing and public relations tools and team logos have become fashionable brands. The larger social meanings sports hold for fans are being eclipsed by their commercial function as a means to sell merchandise and connect corporate sponsors with consumers. This book examines how the American consumer culture affects professional and collegiate sports, reducing fans to consumers and trivializing sports themselves. Instructors considering this book for use in a course may request an examination copy here. This book reviews one hundred years of educational reforms worldwide. Characterized by a tension between governing public and professional forces, the waves of educational reform reflect myriad efforts to define and fulfill professional and public expectations for the world of education. The first wave of reform, based on "progressive" ideals, spread across the globe after World War I, striving to place the student at the center of the education process and respond to the diverse needs of children and youth in a world that included massive population shifts. The second wave nearly obliterated the ideals of the progressive movement that had prevailed for sixty years. Drawing its principles from the business world, the second wave imposed competition, uniform standards, and measurable outputs on students, teachers, and schools, even at the cost of harming at-risk populations and encouraging the infiltration of private sector values into public education systems. The third wave was launched at the turn of the twenty-first century. Seeking to adjust

instructional methods to modern reality, this reform rejected standardized curricula in favor of developing skills such as independent thinking, curiosity, innovation, collaboration among learners, and the ability to mine and process information. Book I reviews the three waves of reform in the United States, England, Canada, Japan, Singapore, Hong Kong, Australia, and Finland. Book II focuses on Israel's education system — past, present, and future. This book provides social science researchers with both a strong rationale for the importance of thinking reflexively and a practical guide to doing it. The first book to build on Pierre Bourdieu's reflexive work, it combines academic analysis with practical examples and case studies. The book will be of interest to researchers and students. In this important collection, eminent education scholars and practitioners remind us that our nation's system of free universal public education is under attack, putting our very democracy in jeopardy. Over and above preparing students for employability, American schools must prepare our youth to be informed citizens and active, constructive participants in the democratic process. These essayists, criticizing as well as lauding our educational system, believe that such a goal is best accomplished through a high-quality, public, free system of schooling designed to serve all our nations' children without regard to race, religion, gender, LGBTQ+ identity, (dis)ability, social class, citizenship status, or language. In the 100th anniversary year of Horace Mann, these thought leaders in education take stock of enduring principles, current dilemmas, and important forward directions. With privateers growing in numbers and seeking to take advantage of systemic breakdowns, this book will serve as a rousing defense of our public schools for our nation's educators, parents, school board members, and politicians. Book Features: Reminds all Americans of the essential roles that schools serve in

contemporary society, beyond simply learning the prescribed school curriculum. Presents a counterpoint to those who promote private or charter schooling at the expense of genuine public schools. Paints a complex and multi-faceted portrait of our public education system and provides a set of diverse and provocative remedies for many pressing contemporary problems of public schooling. The period since the Second World War has seen profound changes in sub-Saharan Africa, notably because of decolonization, the creation of independent nation-states and the transformation of the relationships with the West. Using a range of case studies from news media, maps, popular culture, film and TV the contributions assess how narrative and counter-narratives have developed and been received by their audiences in light of these changes. Examining the overlapping areas between media representations and historical events, this book will be of interest to students and scholars of African Studies and Media and Cultural Studies. The Learning, Education & Games book series is perfect for any educator or developer seeking an introduction to research-driven best practices for using and designing games for learning. This volume, *Bringing Games into Educational Contexts*, delves into the challenges of creating games and implementing them in educational settings. This book covers relevant issues such as gamification, curriculum development, using games to support ASD (autism spectrum disorder) students, choosing games for the classroom and library, homeschooling and gameschooling, working with parents and policymakers, and choosing tools for educational game development. *Learning, Education & Games: Bringing Games into Educational Contexts* is the second in a series written and edited by members of the Learning, Education, and Games (LEG) special interest group of the IGDA (International Game Developers Association).

South Korea is home to cutting-edge electronics, state-of-the-art medical facilities, and ubiquitous high-speed internet. The country's meteoric rise from the ashes of the Korean War (1950-1953) to rank among the world's most technologically advanced societies is often attributed to state-led promotion of science and

technology in nation-building projects. With chapters that discuss Korea's dynastic past, foreign occupations, Cold War geopolitics, postwar rehabilitation in the twentieth century, and the contemporary neoliberal moment, *Future Yet to Come* argues that a longer historical arc and broader disciplinary approach better elucidate these transformations. The book's contributors illuminate the "sociotechnical imaginaries" that promoted, sustained, and contested Korea's scientific, medical, and technological projects in realizing desired futures. Focusing special attention on visual culture and the life sciences, the essays present competing visions held by individuals and institutions of power in the use and purpose of scientific engagements. They demonstrate Korean specificities in culture and language, and the myriad social, political, spatial, and symbolic arrangements that shaped incorporations of and changes to existing systems of knowledge and material practices. Whether discussing moral epistemologies, imperialist or developmentalist thrusts in public health regimes, or new configurations of the "self" enabled by bio industries and media technologies, the book expands both the regional and global understanding of translation, accommodation, and transfer. Tracing imaginaries across the vicissitudes of Korea's past recalls their history and makes visible their shifts and resilience in dynamic political economies. *Future Yet to Come* reminds us how deeply intertwined science, medicine, and technology are to not only our polities, corporations, and societies but also the human condition. Bridging histories of science and medicine with anthropologies of technology and the arts, the book will appeal to students and scholars of Korean and East Asian studies as well as those with interests in the comparative history of medicine, STS (society and technology studies), art history, media studies, transnationalism, diaspora, and postcolonialism. Developed by experienced professionals from reputed civil services coaching institutes and recommended by many aspirants of Civil Services

In this important book, Nicholas Hartlep and Daniel Scott's detailed analyses on both visual and historical representations of Asian Americans in textbooks and teacher manuals used in our elementary and secondary schools poignantly tell us that generations of children are growing up being fed this single story about Asian Americans. As Hartlep and Scott write. Asian Americans have once again been constructed as the "good minority" that can succeed on their own and be used as a political instrument to shame the Blacks for their underachievement and their fight for equality. Over and over again, the media has been telling "a single story" about Asian Americans to the public for the past fifty years. The consequence of this fabricated story is that it "discourages others—even Asian-Americans themselves—from believing in the

validity of their struggles” (Linshi, 2014, p. 1). The New York Times famously declared 2012 to be the year of the MOOC. However, by 2014, the number of academic leaders who believed the model was unsustainable doubled to more than 50%. While the MOOC hype has somewhat subsided, the attitudes and anxieties of this peak time can still be seen influencing universities and their administrations. This is the first volume that addresses Massive Open Online Courses from a post-MOOC perspective. We move

beyond the initial hype and revolutionary promises of the peak-MOOC period and take a sober look at what endures in an area that is still rapidly growing, albeit without the headlines. This book explores the future of the MOOC in higher education by examining what went right, what went wrong and where to next for the massification of higher education and online learning and teaching. The chapters in this collection address these questions from a wide variety of different backgrounds, methodologies and regional perspectives. They explore learner experiences, the move towards course for credit, innovative design, transformations and implications of the MOOC in turn. This book is valuable reading for students and academics interested in education, eLearning, globalisation and information services.
