King Peggy Sep 20 2022 The charming real-life fairy tale of an American secretary who discovers she has been chosen king of an impoverished fishing village on the west coast of Africa. King Peggy has the sweetness and quirkiness of The No. 1 Ladies' Detective Agency series and the hopeful sense of possibility of Half the Sky. King Peggy chronicles the astonishing journey of an American secretary who suddenly finds herself king to a town of 7,000 souls on Ghana's central coast, half a world away. Upon arriving for her crowning ceremony in beautiful Otuam, she discovers the dire reality: there's no running water, no doctor, and no high school, and many of the village elders are stealing the town's

funds. To make matters worse, her uncle (the late king) sits in a morgue awaiting a proper funeral in the royal palace, which is in ruins. The longer she waits to bury him, the more she risks incurring the wrath of her ancestors. Peggy's first two years as king of Otum unfold in a way that is stranger than fiction. In the end, a deeply traditional African town has been uplifted by the ambitions of its headstrong, decidedly modern female king. And in changing Otum, Peggy is herself transformed, from an ordinary secretary to the heart and hope of her community.

Finite Element Procedures Jul 06 2021 BASIC APPROACH:

Comprehensive -- this text explores the "full range" of finite element methods used in engineering practice for actual applications in computer-aided design. It provides not only an introduction to finite element methods and the commonality in the various techniques, but explores state-of-the-art methods as well -- with a focus on what are deemed to become "classical techniques" -- procedures that will be

"standard and authoritative" for finite element analysis for years to come. FEATURES: presents in sufficient depth and breadth elementary concepts AND advanced techniques in statics, dynamics, solids, fluids, linear and nonlinear analysis. emphasizes both the physical and mathematical characteristics of procedures. presents some important mathematical conditions on finite element procedures. contains an abundance of worked-out examples and various complete program listings. includes many exercises/projects that often require the use of a computer program.

Richmond Noir Sep 27 2020 These days, Richmond is a city of winter balls and garden parties on soft summer evenings, a city of private clubs where white-haired old gentlemen, with their martinis or mint juleps in hand, still genuflect in front of portraits of Robert E. Lee. But it's also a city of brutal crime scenes and drug corners. It's a city of world-class ad agencies and law firms, a city of the FFV (First Families of Virginia) and a city of immigrants - from India, Vietnam and Africa to Massachusetts, New York and New Jersey.

Metal-on-Metal Bearings Apr 03 2021 This book addresses the background and significance of the factors potentially influencing the clinical and biological outcomes of metal-on-metal hip

implants. Metal-on-metal bearings were introduced and evaluated as an alternative to other bearing couples, particularly metal-on-polyethylene, due to their enhanced wear resistance as determined in laboratory testing. Initially, reports of short-term clinical outcomes were favorable and an increasing number of metal-on-metal prostheses were implanted. Subsequently, isolated case findings describing adverse tissue responses around the articulation became the harbinger of an increasing number of reports describing pseudotumors and other significant lymphocytic-based responses associated with metal-on-metal prostheses. Questions have been raised as to whether this is an implant, design, or patient-specific response. The reasons why some patients have a negative biological response and pathology while others do not remain to be determined, but tens of thousands of patients in the US, the UK, and around the

world are considered to be at risk. Leading researchers and clinicians describe the issues related to the nature of the biological and pathological responses and the protocols that should be followed to determine if an adverse response is occurring. This book is essential reading for researchers, engineers, and orthopaedic surgeons who are involved in the design, evaluation, and implantation of metal-on-metal prostheses.

The Only Question Is Will Their Love Survive? When Sara and Jacob find out they're pregnant with a baby boy, nothing could make them happier. They were your typical expecting parents - deeply in love, deliriously excited to be starting a family. However, their hopes are dashed when the doctor gives a recommendation for Sara to take an AFT. Five words change their destiny forever... "Your son has Trisomy 21" Their perfect love story unexpectedly spirals into panic, and their dream shatters with it - devastating Sara. Jacob,

confused and troubled with the situation, tries to prompt Sara into following the doctor's suggestion: terminate the pregnancy; assuring her that they can try again. Sara angry at even the thought of destroying the life inside of her, rejects him. Their love, marriage and future suddenly start to fall apart; sending them both on very different journeys... Chapter 1 - Bacon Sara stared out the window in awe. The branches of the trees in the backyard swayed back and forth in the light breeze, the sun's rays piercing through the leaves causing shadows to dance across the wilted grass. Sara practically floated around the kitchen in her excitement which filled the room along with the smell of the sizzling bacon she was cooking. After years of being married, Sara knew exactly how to rouse her husband from sleep, and she knew that the aroma would eventually coax him out of bed. Elated, she let out a girlish laugh. Today is going to be perfect, she thought. Sizzling and crackling sounds from the

frying bacon echoed from the kitchen. She was certain that last pop would have woke him up but she didn't care because she was having too much fun. She let her hand rest on her pregnant belly, patting it affectionately. "I hope you like it out here," she murmured to herself and as if on cue, she felt a tiny flutter in her stomach. Being pregnant was unlike any other chapter of her life, she had never felt more purposeful. She felt like a mess of contradictions. Completely afraid and simultaneously stronger than ever. Powerful, yet unattractive but her mother-in-law had assured her that it was all just the hormones. It didn't stop her from feeling like a thanksgiving turkey, although she did appreciate everyone's attempt at making her feel better. It wasn't long before Jacob's head peeked around the corner, sleepy eyed and resembling more of a toddler than a grown man. His golden hair was creased in the middle, pointing up on one side and flattened on the other. He flashed a smile at

her, "What's all this?" She chuckled, "You have some serious bed head Mr. Michaels." Without a word he came up behind her, wrapping his arms around her waist and placing his hands on her stomach. "Should you really be standing up for such a long time, Mrs. Michaels?" "I'm fine Jacob," she replied. "Besides the doctor said walking is healthy for me and the baby, so standing shouldn't hurt." She laughed patting his cheek playfully. He left a butterfly kiss where her fingers brushed against his lips. "Well, if physical activity is helpful..." Her grin gave way to a full smile as she reached back to swat him. After a short pause he continued, "Seriously, do you know what would make this day better?" She raised her eyebrow, expecting him to say something suggestive (which was typical of him). He spun her around in his arms so that she was facing him, her belly protruded slightly between them making him hold her awkwardly but he went on pretending she didn't notice. "I

was just going to say, what would make this day better..." he trailed off looking deeply into her eyes. "is finding out we're having a boy today." She let out a bark of laughter "Really, that's not where I thought you were going with that."

Nixon's White House Wars

Dec 11 2021 From Vietnam to the Southern Strategy, from the opening of China to the scandal of Watergate, Pat Buchanan—speechwriter and senior adviser to President Nixon—tells the untold story of Nixon's embattled White House, from its historic wins to its devastating defeats. In his inaugural address, Nixon held out a hand in friendship to Republicans and Democrats alike. But by the fall of 1969, massive demonstrations in Washington and around the country had been mounted to break his presidency. In a brilliant appeal to what he called the "Great Silent Majority," Nixon sent his enemies reeling. Vice President Agnew followed by attacking the blatant bias of the media in

a fiery speech authored and advocated by Buchanan. And by 1970, Nixon's approval rating soared to 68 percent, and he was labeled "The Most Admired Man in America". Then one by one, the crises came, from the invasion of Cambodia, to the protests that killed four students at Kent State, to race riots and court ordered school busing. Buchanan chronicles Nixon's historic trip to China, and describes the White House strategy that brought about Nixon's 49-state landslide victory over George McGovern in 1972. When the Watergate scandal broke, Buchanan urged the president to destroy the Nixon tapes before they were subpoenaed, and fire Special Prosecutor Archibald Cox, as Nixon ultimately did in the "Saturday Night Massacre." After testifying before the Watergate Committee himself, Buchanan describes the grim scene at Camp David in August 1974, when Nixon's staff concluded he could not survive. In a riveting memoir from behind the scenes of the most

controversial presidency of the last century, Nixon's White House Wars reveals both the failings and achievements of the 37th President, recorded by one of those closest to Nixon from before his political comeback, through to his final days in office.

Pitching Ideas Jun 05 2021 We are good at designing beautiful products and we offer good services. We always know exactly what the user wants and we know dozens of methodologies. However, if we have to convince our customers and colleagues, we find it rather difficult. For one reason or another, pitching ideas is one of the most undervalued practices in the creative field. From convincing a colleague to opt for a certain methodology to persuading a customer to go for a certain concept, you can have the best ideas in the world, but if you are not able to

bring them across, they will never become reality. In this book the author will take you inside the heads of the people you have to convince. Pitching Ideas will help you to find the essence of the idea you want to get across and will explain how you can really convince the right people in the end.

Basic Electrical and Electronics Engineering Nov 29 2020

Computational Nanotoxicology Oct 09 2021 The development of computational methods that support human health and environmental risk assessment of engineered nanomaterials (ENMs) has attracted great

interest because the application of these methods enables us to fill existing experimental data gaps. However, considering the high degree of complexity and multifunctionality of ENMs, computational methods originally developed for regular chemicals cannot always be applied explicitly in nanotoxicology. This book discusses the current state of the art and future needs in the development of computational modeling techniques for nanotoxicology. It focuses on (i) computational chemistry (quantum mechanics, semi-empirical methods, density functional theory, molecular mechanics, molecular dynamics), (ii) nanochemoinformatic methods (quantitative structure-activity relationship modeling, grouping, read-across), and (iii) nanobioinformatic methods (genomics, transcriptomics, proteomics, metabolomics). It reviews methods of calculating molecular descriptors sufficient to characterize the structure of nanoparticles, specifies recent

trends in the validation of computational methods, and discusses ways to cope with the uncertainty of predictions. In addition, it highlights the status quo and further challenges in the application of computational methods in regulation (e.g., REACH, OECD) and in industry for product development and optimization and the future directions for increasing acceptance of computational modeling for nanotoxicology.
