Hewlett-Packard Official Scanner Handbook Jun 06 2021 With more than 40 step-by-step projects covering a wide range of activities for both home and business, this engaging guide will help you produce distinctive documents and designs, showing you throughout how to use your scanner more efficiently-and always more creatively. While scanners are relatively easy to use, the more you know, the more you can do with them. Although Hewlett-Packard products are used for examples throughout the book, The Hewlett-Packard Official Scanner Handbook covers scanning issues that are virtually the same no matter what scanner you own, such as installation, optimization, and resolution issues.

How to Use Windows 98 Jun 25 2020 Covers introductory user needs from program installation and connecting to the Internet, to faxing and gaming.

Writer Identification Using Hand-Printed and Non-Hand-Printed Questioned Documents Aug 08 2021 Several federal district court judges have recently referred to the purported lack of information on the proficiency of forensic document examiners (FDEs) in identifying writers of hand-printed documents. In order to provide the necessary information, we have re-analyzed data on writer identification that were collected in 1996 from 90 forensic document examiners and 34 laypersons. These data were used previously to assess the proficiency of FDEs using handwritten documents in several different types of writing. In the new analysis we separated data on handprinted (HP) documents from data on non-hand-printed (NHP) documents and compiled error rates and statistics in each category. The main findings are: (1) whether or not the documents were hand-printed, the performance of FDEs was much better than that of laypersons; (2) statistical tests found no difference between the data provided by the FDEs in the HP and NHP categories; (3) statistical tests found no difference between the data provided by laypersons in the HP and NHP categories; and (4) statistical tests found differences between the data provided by the FDEs and the laypersons in both the HP and NHP categories. Similar results were obtained when hand-printed documents were compared to cursive documents and when cursive documents were compared to non-cursive documents. All the evidence indicates that in our proficiency test the performance of FDEs in writer identification was much better than the performance of laypersons in each one of the following document categories: (1) handprinted; (2) non-hand-printed; (3) cursive; and (4) non-cursive.
