It is one of the most popular genres of our pathological public sphere, and an integral part of our contemporary wound culture—a culture, or at least cult, of commiseration. If we cannot gather in the face of anything other than crime, violence, terror, trauma, and the wound, we can at least commiserate. That is, as novelist Chuck Palahniuk writes, we can at least "all [be] miserable together." The "murder leisure industry," its media, and its public: these modern styles of violence and intimacy, sociality and belief, are the subjects of True Crime: Observations on Violence and Modernity. True Crime draws on and makes available to American readers—and tests out—work on systems theory and media theory (for instance, the transformative work of Niklas Luhmann on social systems and of Friedrich Kittler on the media apriori—work yet to make its impact on the American scene). True Crime is at once a study of a minor genre that is a scale model of modern society and a critical introduction to these forms of social and media history and theory. With examples, factual and fictional, of the scene of the crime ranging from Poe to CSI, from the true crime writing of the popular Japanese author Haruki Murakami to versions of "the violence-media complex" in the work of the American novelist Patricia Highsmith and the Argentinian author Juan José Saer, True Crime is a penetrating look at modern violence and the modern media and the ties that bind them in contemporary life. To the dismay of religious leaders, study after study has shown a steady decline in affiliation and identification with traditional religions in America. By

2014, more than twenty percent of adults identified as unaffiliated--up more than seven percent just since 2007. Even more startling, more than thirty percent of those under the age of thirty now identify as "Nones"--answering "none" when queried about their religious affiliation. Is America losing its religion? Or, as more and more Americans choose different spiritual paths, are they changing what it means to be religious in the United States today? In *Choosing Our Religion*, Elizabeth Drescher explores the diverse, complex spiritual lives of Nones across generations and across categories of self-identification such as "Spiritual-But-Not-Religious," "Atheist," "Agnostic," "Humanist," "just Spiritual," and more. Drawing on more than one hundred interviews conducted across the United States, Drescher opens a window into the lives of a broad cross-section of Nones, diverse with respect to age, gender, race, sexual orientation, and prior religious background. She allows Nones to speak eloquently for themselves, illuminating the processes by which they became None, the sources of information and inspiration that enrich their spiritual lives, the practices they find spiritually meaningful, how prayer functions in spiritual lives not centered on doctrinal belief, how morals and values are shaped outside of institutional religions, and how Nones approach the spiritual development of their own children. These compelling stories are deeply revealing about how religion is changing in America--both for Nones and for the religiously affiliated family, friends, and neighbors with whom their lives remain intertwined. Readers can get the edge on SAT, LSAT, MCAT, GRE, and other entrance and professional exams by following a step-by-step system that eliminates test anxiety, reduces confusion, and ensures they finish every multiple choice exam on time. (Study Guides) Designed to be an all in one solution, this book helps users to get up and running on their computers and learn the pre-loaded software applications. This third edition has been revised and updated to include coverage of new PC hardware and software. How much information do psychologists, psychometricians and examiners actually possess about the way the examinees perceive tests, testers and the test situation? The contributors to this book share the belief that the examinee's perspective on testing is both important and relevant, and as such should be incorporated into the improvement of specific tests as well as testing in general. Competence orientation has become a defining element of vocational education in German-speaking countries. In this context, tasks are considered the "transmission belts" to implement the reformed educational standards. In her dissertation the author takes a view on the systematic analysis of task characteristics as a method to inspect the degree of tasks' cognitive requirements. The theoretical-conceptual part of the dissertation gives a psychological and didactical justification of the principles underlying the tasks' cognitive requirement. The effects are analysed in two empirical studies. The first study takes a look on the basis of accounting tasks from Chinese vocational school textbooks, using the structuring content analysis (Mayring, 2008). The second empirical study inspects accounting teachers' perceptions and judgments by interviews. Based on the results, the author develops suggestions for the use of the concept of tasks' cognitive requirement in the didactic training of (prospective) teachers at commercial schools.
