*Language in the Brain* Nov 07 2021 This book assesses current assumptions about how language is acquired, remembered and retained as impulses in the brain, from the perspective of neurolinguistics, which is based on neuroanatomy and neurophysiology. Fred C. C. Peng argues that language is behaviour, which has evolved in human genetics through time. Like all behaviours, language utilises many body parts which are controlled by the cortical and subcortical structures of the brain. Language in the brain is memory-governed, meaning-centred, and multifaceted. This view is a challenge to conventional neuroscience, which sees language and speech as separate entities; such a convention is not consistent with how the brain functions. Dr Peng's study of language in the brain has wide-reaching implications for the study of language disorders, neurolinguistics, and psycholinguistics in dealing with dementia, aphasia, and schizophrenia. This cutting-edge research monograph presents challenging new insights in the field of neuroscience to a linguistic audience and will also benefit neuroscientists. It will be essential reading for academics researching any aspect of language and the brain.

**Making Play Just Right: Unleashing the Power of Play in Occupational Therapy** Oct 06 2021 At the heart of Making Play Just Right: Unleashing the Power of Play in Occupational Therapy is the belief that the most effective way to ensure pediatric occupational therapy is through incorporating play. The Second Edition is a unique resource on pediatric activity and therapy analysis for occupational therapists and students. This text provides the background, history, evidence, and general knowledge needed to use a playful approach to pediatric occupational therapy, as well as the specific examples and recommendations needed to help therapists adopt these strategies.

*Functional Thinking for Value Creation* Jul 15 2022 After the IPS2 conferences in Cranfield and Linköping in 2009 and 2010 the 3rd CIRP International Conference on Industrial Product Service Systems (IPS2) 2011 takes place in Braunschweig, Germany. IPS2 itself is defined as "an integrated industrial product and service offering that delivers value in use". The customers expect comprehensive solutions, which are adapted to their individual needs. IPS2 offers the possibility to stand out from competition and for long-term customer loyalty. Particularly in times of economic crisis it becomes apparent which producing companies understand to satisfy the needs and requirements of their customers. Especially in this relatively new domain IPS2 it will be important to keep track of the whole context and to seek cooperation with other research fields and disciplines. The 3rd CIRP International Conference on Industrial Product Service Systems (IPS2) 2011 serves as a platform for such collaborations and the discussion of new scientific ideas.

*Multiple Muscle Systems* Sep 05 2021 The picture on the front cover of this book depicts a young man pulling a fishnet, a task of practical relevance for many centuries. It is a complex task, involving load transmission throughout the body, intricate balance, and eye head-hand coordination. The quest toward understanding how we perform such tasks with skill and grace, often in the presence of unpredictable perturbations, has a long history. However, despite a history of magnificent sculptures and drawings of the human body which vividly depict muscle activity and interaction, until more recent times our state of knowledge of human movement was rather primitive. During the past century this has changed; we now have developed a considerable database regarding the composition and basic properties of muscle and nerve tissue and the basic causal relations between neural function and biomechanical movement. Over the last few decades we have also seen an increased appreciation of the importance of musculoskeletal biomechanics: the neuromotor system must control movement within a world governed by mechanical laws. We have now collected quantitative data for a wealth of

human movements. Our capacity to understand the data we collect has been enhanced by our continually evolving modeling capabilities and by the availability of computational power. What have we learned? This book is designed to help synthesize our current knowledge regarding the role of muscles in human movement. The study of human movement is not a mature discipline.

**Spatial Economics for Building Back Better** Oct 26 2020 The central theme of this book is national land and infrastructure design in the age of the declining population and the recovery from the Great East Japan Earthquake in the affected regions in Japan. Based on the theory of spatial economics and evidence from Japanese history, the authors show that the growing economy with a population increase develops into a multi-cored and complex structure. In the population decline phase, however, such construction will be destabilized because of agglomeration economies in the central core. Then, a catastrophic shock that strikes may provoke the decline of the lower-rank-size provincial cities and their eventual disappearance if they compete only in lower prices of staple products. Not only is the practice bad for the residents; it also leads to lower national welfare resulting from the loss of diversity and overcrowded big cities. The authors argue that small local towns can recover and will be sustained if they will endeavor in innovative production by making good use of local natural resources and social capital. Under the ongoing declining population in Japan, an undesirable concentration in Tokyo will proceed further with increasing social cost and risk. The recent novel coronavirus pandemic has highlighted that concern.

Activity Analysis & Application Jan 21 2023 This text provides applicable material to any of the doing portions of the occupational therapy curriculum, fieldwork and workplace that address the use of daily life skills, work and leisure activities as strategies for intervention. The book is sequentially organized from the historical background of occupation as the basis of occupational therapy, to its use as therapeutic intervention.

*Obesity, An Issue of Endocrinology and Metabolism Clinics of North America* Feb 27 2021 This issue of Endocrinology and Metabolism Clinics will cover Obesity. Curated by Dr. Michael D. Jensen, this issue will explore topics in the field that are relevant for practicing clinicians. This issue is one of four selected each year by the series Consulting Editor, Adriana G. Ioachimescu. The volume will include articles on: The role of the environment in the "obesity epidemic, Endoscopic treatments for obesity, Visceral fat, Role of commercial weight loss programs in medical management of obesity, Racial differences in metabolic consequences of fat gain, Sex differences in adipose tissue function, Common and rare complications of bariatric surgery, Strategies for physical activity interventions in the treatment of obesity, Effects of pregnancy on childhood overweight and obesity, Iatrogenic Obesity, Growth hormone and obesity, and Barriers and solutions for prescribing obesity pharmacotherapy.

**Functional Performance in Older Adults** Jun 02 2021 Support the very best health, well-being, and quality of life for older adults! Here's the ideal resource for rehabilitation professionals who are working with or preparing to work with older adults! You'll find descriptions of the normal aging process, discussions of how health and social factors can impede your clients' ability to participate in regular activities, and step-by-step guidance on how to develop strategies for maximizing their well-being.

**Architecture In Use** Jan 09 2022 This unique book discusses programming, design and building evaluation providing a 'joined up' approach to building design. By linking the functional and architectonic qualities of a building, the authors show the practical implications of the utility value of buildings. Starting by looking at how the relationship between form and function has been dealt with by different approaches to architecture from a historical perspective, it goes on to discuss how the desired functional quality and utility value of a building can be expressed in a brief and given a physical form by the architect. Finally, it advises on how to carry out post-occupancy evaluation and provides the architect with methods and techniques for testing whether the intended utility value of a building has been achieved.

**Digital Computer Applications to Process Control** Aug 16 2022 Considers the application of modern control engineering on digital computers with a view to improving productivity and product quality, easing supervision of industrial processes and reducing energy consumption and pollution. The topics covered may be divided into two main subject areas: (1) applications of digital control - in the chemical and oil industries, in water turbines, energy and power systems, robotics and manufacturing, cement, metallurgical processes, traffic control, heating and cooling; (2) systems theoretical aspects of digital control - adaptive systems, control aspects, multivariable systems, optimization and reliability, modelling and identification, real-time software and languages, distributed systems and data networks. Contains 84 papers.

**Brain-Computer Interfaces** Feb 16 2020 The success of a BCI system depends as much on the system itself as on the user's ability to produce distinctive EEG activity. BCI systems can be divided into two groups according to the placement of the electrodes used to detect and measure neurons firing in the brain. These groups are: invasive systems, electrodes are inserted directly into the cortex are used for single cell or multi unit recording, and electrocorticography (EcoG), electrodes are placed on the surface of the cortex (or dura); noninvasive systems, they are placed on the scalp and use electroencephalography (EEG) or magnetoencephalography (MEG) to detect neuron activity. The book is basically divided into three parts. The first part of the book covers the basic concepts and overviews of Brain Computer Interface. The second part describes new theoretical developments of BCI systems. The third part covers views on real applications of BCI systems.

**Investigation of Political Activities by White House and Federal Agency Officials During the 2006 Midterm Elections** Nov 26 2020 This report presents the U.S. Office of Special Counsel's (OSC) investigative findings regarding White House Office of Political Affairs (OPA) employees conducting political briefings for agency political appointees during work hours and in the federal workplace. OSC's investigation eventually expanded to examine other Hatch Act concerns involving OPA employees and agency political appointees. The activities investigated by OSC occurred during President George W. Bush's administration (Bush II). In addition, OSC explains its findings and legal conclusions, and recommends certain practices and regulatory amendments that OSC believes should be adopted to ensure future compliance with the Hatch Act. Illus. This is a print on demand report.
